# INTERNSHIP MARKET DYNAMICS ANALYSIS IN INDIA (2025)

**Sector - EdTech**

Data Analytics Capstone  
Project | Group 7

---

---

# CONTEXT & PROBLEM

In 2025, India's internship ecosystem spans thousands of opportunities across cities, industries, companies, and roles. However, students and job seekers often struggle to identify patterns in internship offerings such as which skills are most in demand, how internship duration and stipends vary by sector, and what geographical disparities exist in opportunity distribution. Although a large dataset of internship postings is available, it remains underutilized due to a lack of structured analysis and visualization frameworks. This project aims to transform raw internship posting data into an interactive **dashboard and analytical report** that reveals key trends, compares industries and cities, highlights high-demand skills, and enables students and academic institutions to make data-driven decisions for career planning and curriculum alignment.

---

# DATA PIPELINE & CLEANING

Data was sourced from the Kaggle dataset “**Internship Opportunities in India (2025)**”, which contains **8,485 internship postings** scraped from Internshala across major Indian cities, including Bangalore, Mumbai, Delhi, Hyderabad, and others. The dataset includes attributes such as company name, role, location, stipend, duration, required skills, work mode (remote/on-site), and posting date.

Data cleaning involved:

- Handling missing stipend and duration values by categorizing them into structured ranges (e.g., “Unpaid”, “₹0–5K”, “₹5K–10K”, etc.)
- Standardizing inconsistent location names (e.g., “Bangalore”, “Bengaluru”) into unified city categories
- Normalizing stipend formats (fixed, performance-based, lump sum) into numeric or categorized ranges
- Extracting and cleaning skill keywords from text fields for frequency analysis

# MAJOR MARKET INSIGHTS

Delhi, Chennai, and Gurgaon dominate internship postings, contributing over **22%** of total opportunities, indicating strong concentration in Tier-1 cities.

## City Wise Distribution

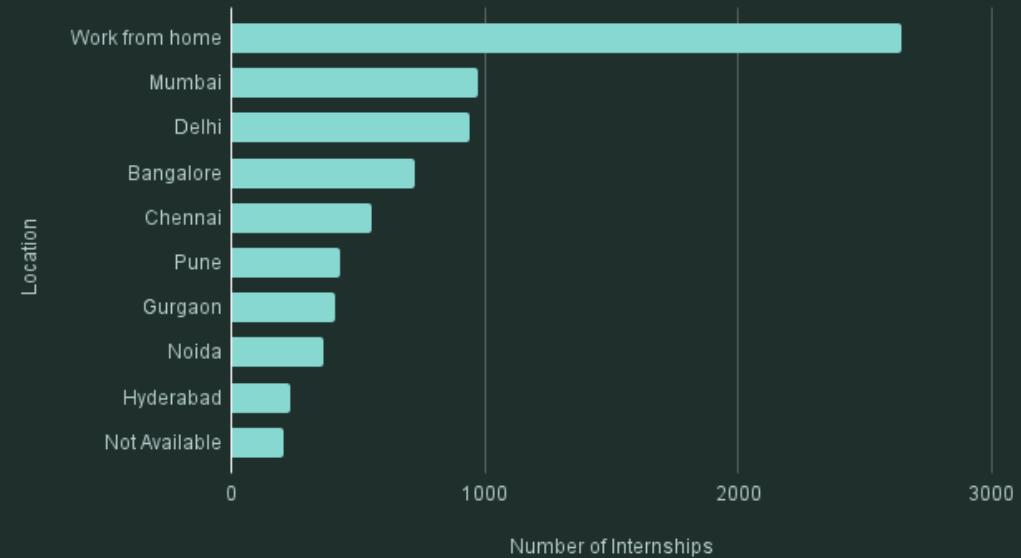

Most internships fall within the 13–26 month range, showing employer preference for long-term engagement.

## Duration Analysis

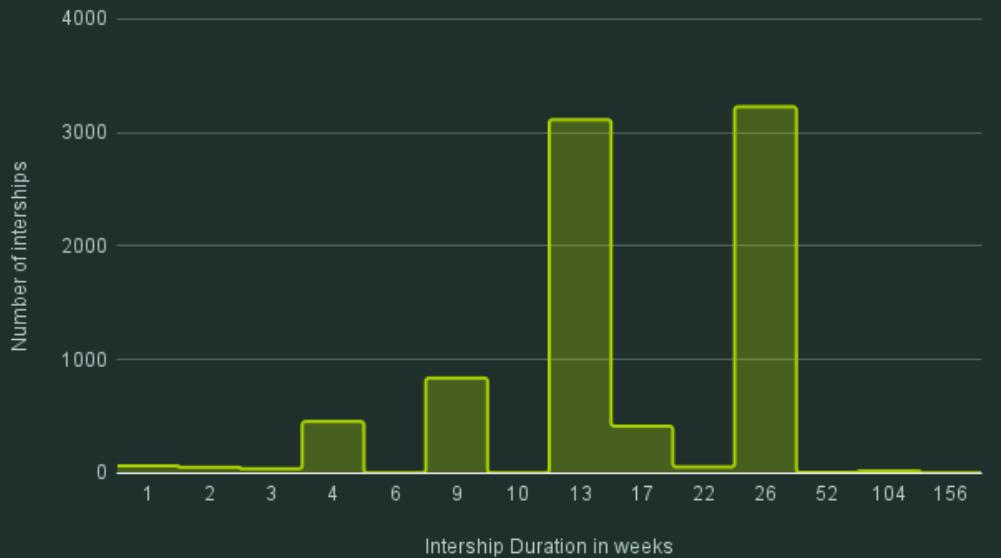

Remote internships are more common in Tech domains, while on-site roles dominate Creative & Sales roles

## Remote vs On-Site Pattern

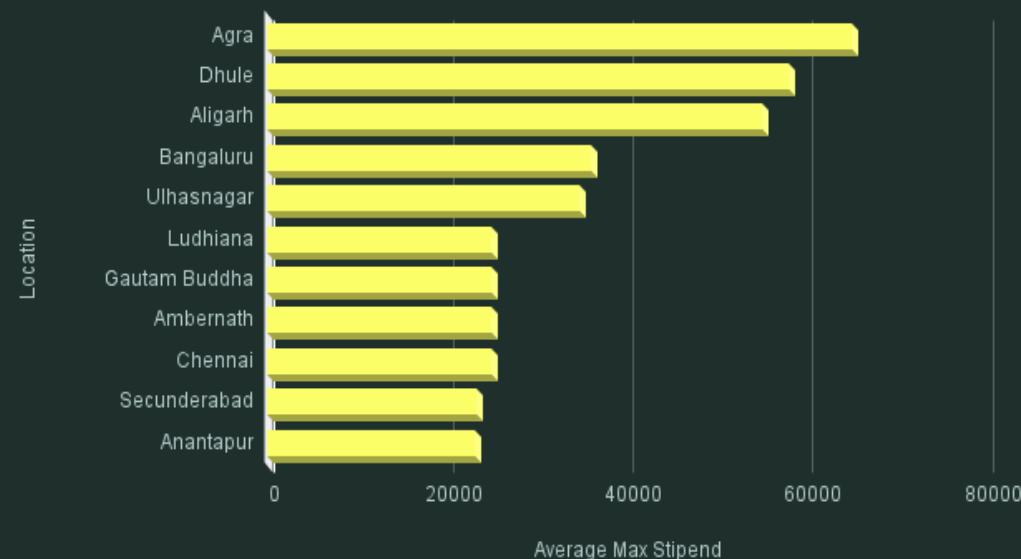

### Number of Internships vs. Location

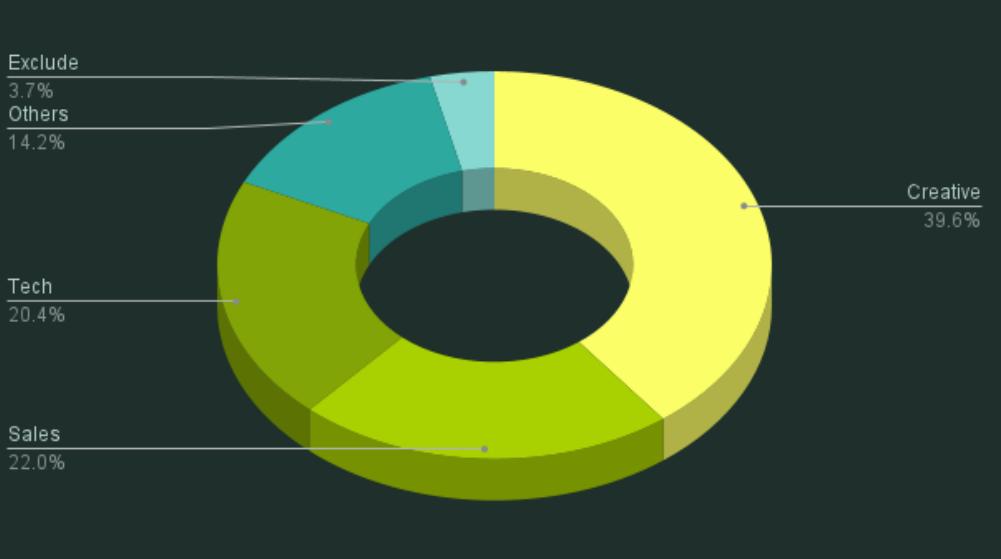

### Intership Duration in weeks vs. Number of interships

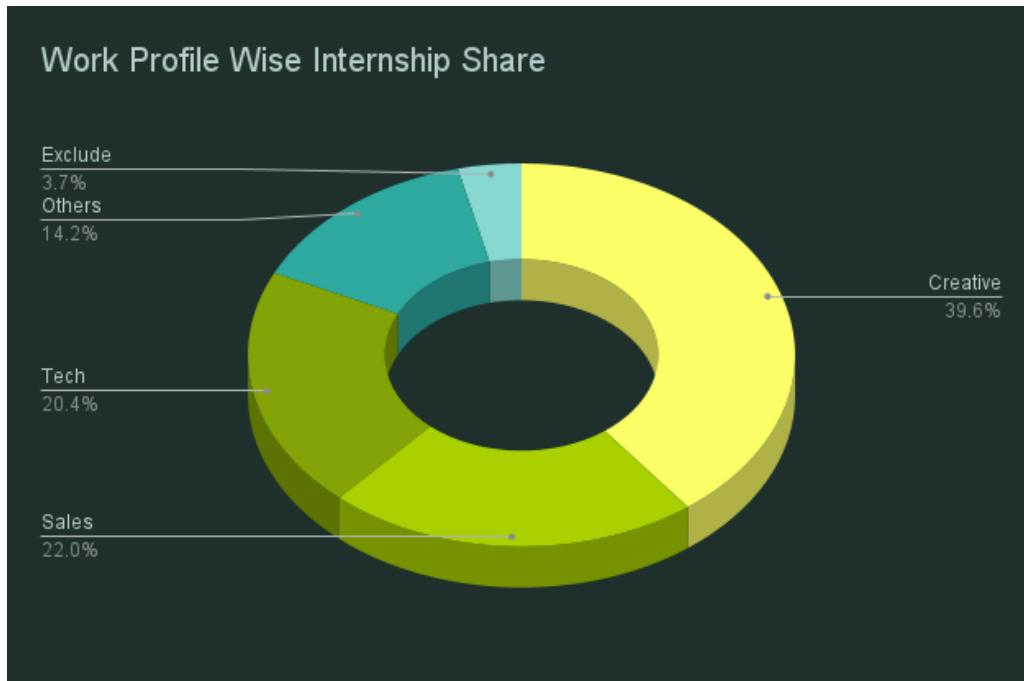

### Average Max Stipend vs. Location

### Work Profile Wise Internship Share

# SEGMENTATION & DOMAIN DISTRIBUTION

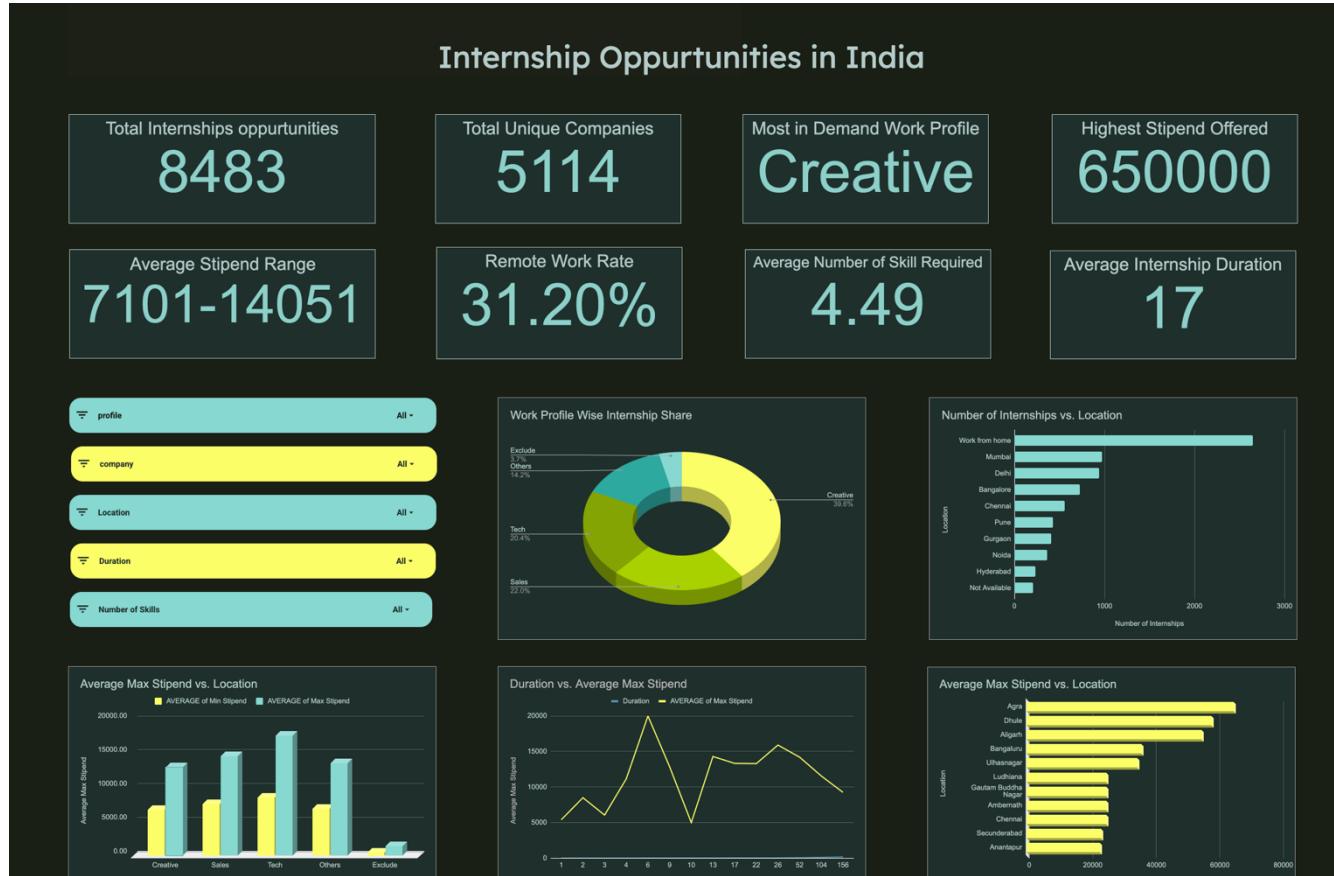

**Creative roles dominate the internship market, contributing 39.6% of total listings**, making it the largest opportunity cluster across India.

**Sales (22.0%) and Tech (20.4%)** together account for over 42% of internships, indicating strong demand in revenue-generating and technical functions.

The “**Others**” category (14.2%) reflects emerging or niche domains, while only 3.7% fall under excluded/specialized roles, showing limited concentration outside core categories.

## Work Profile Analysis

# INTERACTIVE DASHBOARD OVERVIEW

The dashboard delivers an executive overview of internship market trends, combining KPIs, city-wise opportunity distribution, stipend comparison, domain segmentation, duration-pay analysis, and skill demand insights. This integrated view supports data-driven career planning and informed internship selection.
